400 CHINA BASIN

MANDATORY
TRASH CHUTE AND DISPOSAL POLICY

1. All Boxes must be HAND CARRIED to the ground floor trash room and left beside the trash room door for janitorial to remove.

2. All boxes must be FLATTENED before leaving in or next to trash room door.

3. Boxes are NOT permitted to be left in trash chute rooms on residential floors, they must be hand carried to the trash room and NEVER put down the chute, ever.

4. All trash bags containing rubbish or trash must be DOUBLE TIED before placing in the chute.

5. All compost must be placed in biodegradable bags and double tied before placing in the trash chute. Absolutely no LOOSE FOOD NOR TRASH Please!

6. Absolutely NO STYROFOAM is permitted in any trash chute, these must be placed in clear and transparent bag on the ground floor trash room.

7. If your trash bag does not fit the trash chute opening on your floor, do NOT stuff it down the trash chute. If it doesn't fit the hole, this means it can get stuck in the trash chute. Either split the garbage into a second bag, or hand carry down to the ground floor trash chute.

8. No liquids nor loose trash or compost is permitted in the trash chutes. Food and liquid gets trapped in the chute, where bacteria can grow and become air-borne and potentially flow into lungs when people open the trash chute door later.

9. No hard items nor appliances nor bulky items are permitted in the trash chute, not even in bags. If you would like to throw a hard encased item out, please call the Senior Community Manager for guidance on its disposal.

10. No hazardous materials nor liquids are permitted to be disposed anywhere on property.

Please note: Management has already had to issue violations for one or more of the above. Clearing trash chutes of boxes and over-sized garbage bags is not a part of the present janitorial contract, so the Association is charged extra. Please note: that at least one homeowner will be charged back for these extra services for placing flattened boxes in the trashchute.
